PRESS RELEASE

Feel and Learn the Swing of Your Dreams

Imagine yourself on the first tee, driver in hand, the beauty of nature surrounding you at every turn. Bubbling with confidence you place your ball on the tee and hit it like a professional. Watch it fly 260 yards straight down the middle of the fairway. Revolutionary technology recently introduced into the golf training world has allowed this dream to become reality by actually allowing each golfer to feel a Dream Swing which is the best swing his or her body can swing. This science makes improving from a bad golf swing to a great golf swing simple and easy.

Introducing The Dream Swing Golf Training and Teaching System. This system is so well engineered that it teaches the proper swing mechanics for every shot needed to play a perfect round, whether you need to hit a draw or fade from the driver to the putter.

The Dream Swing is truly miraculous in the way it teaches muscle or motor memory by allowing it's students to feel the swing the pros swing. Besides improving your golf score it will strengthen the specific muscles needed to perform a correct golf swing resulting in increased power and distance, more control and consistency and better balance. It eliminates slicing and hooking and promotes proper tempo.

The Dream Swing is engineered to adjust to every body shape and size. It is a fantastic golf training tool for juniors because they will enjoy perfect practice without the presence of a golf instructor. Golfers get tired and frustrated practicing mistakes. The Dream Swing will make each practice session productive. Every swing on the device teaches the student what is necessary to play better golf.

The features and benefits of The Dream Swing are AMAZING.

- For teachers and students it makes communicating on the lesson tee simple and easy. The Dream Swing forces students to do what the instructor tells them. This system bypasses the conscious learning, programming the mind-body-coordination with the feeling of the correct swing. It allows students to feel what the instructor tells them *It is extremely difficult to duplicate what you hear, but very easy to duplicate what you feel.*

The Dream Swing is scientifically and ergonomically designed for maximum body performance and protection. It keeps the body vertically aligned, eliminating swaying, dipping, sliding and reverse axis or pivoting, rendering joints and lower back pain free and relaxed. The Dream Swing isolates golf muscles and through continued use strengthens and conditions the entire body.

- The Dream Swing maximizes club head speed and power. The first time in it you will pick up 5 to 7 mph club head speed. This instrument is governed by simple laws of physics. It builds consistency and control, improves accuracy and increases distance that results in more fun on the golf course. ***The Dream Swing eliminates the tremendous amount of time, money and effort golfers waste practicing mistakes.***

- The Dream Swing is built with the highest quality materials and workmanship. It can be used indoors as well as out. It is fully guaranteed with one year warranty on all parts. Pleasantly priced at \$399, The Dream Swing costs less than a tour quality driver. It is the best investment a golfer can make to insure lower scores.

Now is the time to add precision to your game. For a demonstration or to receive more information refer to web site <http://www.dreamswing.com> or call Clint Harper at 1-800-532-4542, or e-mail clint@dreamswing.com.

The lighted line shows the path the club head follows through the entire swing.

IT DOESN'T GET BETTER THAN PERFECT!

EVERY GOLFER NEEDS A DREAM SWING
